Education

University of Houston – Bachelor of Science in Computer Science; **3.7 GPA**

Expected May 2027

Skills

Languages: JavaScript, Python, Java, C++, TypeScript, HTML, CSS, SQL

Technologies: React, Next.js, Flask, React Native, Tailwind CSS, Supabase, PyQt, SQLite, Git, Node.js

Experience

Application Development Intern, Citibank – Irving, TX

[Jun 2026 – Present]

- Architect micorservices in Spring Boot deployed with Docker and Kubernetes

Software Engineering Intern, Opportunity Knocks – Remote, USA

Aug 2025 – Jan 2026

- Built an end-to-end video meeting workflow for an internship matchmaking platform, utilizing React/TypeScript, 100ms (WebRTC), and Supabase to support in-chat scheduling and RSVPs
- Shipped a secure dual-path React Native auth flow with persistent sessions and profile onboarding
- Developed a unified Supabase Storage workflow for profile media and student documents, storing 400+ files
- Reduced manual customer support time by ~5 hours weekly by building an automated email processing system with Google Apps Script and Gmail API, handling 20+ daily inquiries

Undergraduate Research Assistant, PASS Lab – University of Houston

Feb 2026 – May 2026

- Developed an LLM-powered static analysis tool that recovers pointer types from LLVM compiled binaries
- Addressed limitations in modern decompilers and malware analysis pipelines by using the restored pointer types to improve the accuracy of downstream security and reverse engineering tooling
- Presented research at a university symposium, placing 3rd out of all undergraduate research projects

Undergraduate Research Assistant, Sen Lab – University of Houston

Sept 2025 – May 2026

- Designed a Python Py-Qt desktop application that translated command-line processes for protein sequence visualization and alignment into an interactive GUI
- Migrated download links for large NCBI protein datasets on AWS S3 with automated weekly updates
- Integrated MATLAB analysis logic to enable identification of glycosylation sites within amino-acid sequences

Volunteer Data Intern, Generation One – Houston, TX

Jan 2026 – April 2026

- Standardized and cleaned multi-sheet survey data into analysis-ready formats, supporting reliable aggregation across dozens of behavioral and routine indicators
- Built a reproducible SQL analysis workflow, producing shareable charts and a consolidated analysis
- Designed one-pagers and written reports by translating raw survey outputs into KPIs

Projects

VelvetCode: Real-time Collaborative Code Editor  – Next.js · TypeScript · Tailwind CSS · Socket.IO · Redis

- Delivered a real-time collaborative web-based code editor at CodeRED Astra Hackathon, scaling to 10+ concurrent users with sub-100ms synchronization latency
- Achieved sub-2-second in-browser code execution across 19+ programming languages with Piston API
- Improved server responsiveness through Redis caching for document, chat, and room state management

QuizifAI: AI-Powered Learning Platform  – Flask · Python · Alpine.js · JavaScript · Bootstrap CSS · jQuery · SQLite

- Reduced student study time by building an AI-powered quiz creator that automatically generates practice quizzes from study materials, leveraging OCR and Gemini for smart question generation
- Stored 100+ quizzes by designing a normalized SQLite database schema with foreign key relationships
- Secured user data with an authentication system featuring password encryption and role-based access control
